PUTRA AJRIL FATAH

putraajril2@gmail.com | linkedin.com/in/ajrilfatah | Sleman, D.I. Yogyakarta

SUMMARY

Full Stack & Web3 Developer focused on decentralized architecture and secure systems. Proven experience building smart contracts, ZK-proof integrations, and automated escrow systems. Passionate about solving complex data integrity challenges and contributing to robust, scalable infrastructures.

EDUCATION

Universitas Amikom Yogyakarta | Bachelor of Informatics 2022 – 2026

Current GPA: 3.32/4.00 | Focus: Programming/Data Science

EXPERIENCE

Full Stack Developer – Munk Studio August 2025 – Present

- Lead client communication and translate business requirements into technical specifications.
- Architect system design and select appropriate tech stacks for each project.
- Plan and manage development sprints to ensure timely delivery.
- Build and maintain full-stack web and Web3 applications across frontend and backend layers.

PROJECTS

Veilfi - *Solidity, ZK Circuits, Web3*

- Decentralized yield aggregation platform built with smart contracts and zero-knowledge circuits.
- Users earn yield across multiple DeFi strategies while preserving privacy through ZK proofs.
- Ensures secure fund management, verifiable compliance, and trustless operation without centralized intermediaries.

Velipe - *Solidity, IPFS, Web3*

- Decentralized document verification platform built with smart contracts and a Web3 frontend.
- Enables secure issuance and validation of digital documents on-chain using IPFS for immutable storage.
- Eliminates reliance on centralized authorities through blockchain-enforced authenticity.

SathaFly - *Solidity, IDRX, NFT, Web3, ERC-20*

- Web-based dApp for purchasing flight tickets as NFTs using IDRX tokens.
- Smart contract automatically executes refunds for flight delays or cancellations without manual claims.

Gasan (In Progress) - *Python, FastAPI, Escrow*

- AI-driven fraud prevention platform for community savings (arisan).
- Mitigates default risks through predictive analytics and automated escrow disbursements.
- Ensures transparent fund management without reliance on manual verification.

June Label - *Laravel, Inertia.js, React, Filament*

- Modern e-commerce website with premium product gallery managed via Filament Admin Panel.
- Integrated cart and checkout system for seamless end-to-end shopping experience.

SiPandu-DM - *Flutter, FastAPI, PostgreSQL, Drift, Docker*

- Engineered an offline-first mobile application with a strict 3-tier architecture to monitor Type 2 Diabetes risk at the community level.
- Implemented robust local data synchronization using the Outbox Pattern and Isar NoSQL for reliable operation in low-connectivity environments.
- Designed a secure backend API with Python, integrating AES-256-GCM encryption and Role-Based Access Control to ensure medical data confidentiality and regulatory compliance.

Billet - *Solidity, Next.js, Foundry, Base L2, Ponder*

- Built an on-chain smart ticketing protocol on Base Layer 2 utilizing ERC-1155 to mitigate scalping through trustless escrow and strict secondary market restrictions.
- Architected on-chain price ceiling enforcement and conditional royalty routing (ERC-2981) to automatically restrict peer-to-peer transfers and manage event organizer revenues.
- Designed a decoupled Web3 architecture integrating smart contracts, a Ponder-based indexer for efficient GraphQL event querying, and a Next.js/Wagmi frontend.

SKILLS

Languages & Frameworks: Solidity,, Move, Node.js, Python,, Laravel, Foundry
Frontend: React, Inertia.js, Next.js, HTML, CSS, JavaScript
Blockchain & Web3: Smart Contracts, ZK Proofs, IPFS, DeFi, NFT, Wallet Integration
Database: PostgreSQL, MySQL, Supabase
Tools: Git, Postman, Figma, Visual Studio, Docker
Soft Skills: Adaptability, Teamwork, Problem-Solving, Communication, Crypto Market Analysis
